Site Matters-Carol Burns
2005-07-08 One of the trends in twentieth century architecture and planning has been to denigrate and ignore the site, or larger context (both physical and social), surrounding a building or set of buildings. Focussing on Le Corbusier's designs, Site Matters presents that first considered theory and

vocabulary for the inevitable reaction against Modernism in planning, beginning in the 1960s and swelling through the 1980s as architects and planners alike developed a new appreciation of site, reincorporating the wider context into their plans. Theoretical essays and empirically grounded pieces combine to provide the language and theory of this re-emergence of site, looking at Le Corbusier's designs,

contemporary suburbs, and the planning agendas involved at the World Trade Center site. Groundbreaking and innovative, *Site Matters* provides valuable theory and vocabulary for planners and architects.

Collage City-Colin Rowe
1984-03-15 This book is a critical reappraisal of contemporary theories of urban planning and design and of the role of the architect-planner in an urban context. The authors, rejecting the grand utopian visions of "total planning" and "total design," propose instead a "collage city" which can accommodate a whole range of utopias in miniature.

The Renaissance Perfected-
D. Medina Lasansky 2004
Mussolini's bold claims upon the monuments and rhetoric of ancient Rome have been the subject of a number of recent books. D. Medina Lasansky shows us a much less familiar side of the cultural politics of Italian Fascism, tracing its wide-ranging efforts to adapt the

nation's medieval and Renaissance heritage to satisfy the regime's programs of national regeneration. Anyone acquainted with the beauties of Tuscany will be surprised to learn that architects, planners, and administrators working within Fascist programs fabricated much of what today's tourists admire as authentic. Public squares, town halls, palaces, gardens, and civic rituals (including the famed Palio of Siena) were all "restored" to suit a vision of the past shaped by Fascist notions of virile power, social order, and national achievement in the arts. Ultimately, Lasansky forces readers to question long-standing assumptions about the Renaissance even as she expands the parameters of what constitutes Fascist culture. The arguments in *The Renaissance Perfected* are based in fresh archival evidence and a rich collection of illustrations, many reproduced for the first time, ranging from photographs and architectural drawings to tourist posters and film stills. Lasansky's groundbreaking book will be essential reading

for students of medieval, Renaissance, and twentieth-century Italy as well as all those concerned with visual culture, architectural preservation, heritage studies, and tourism studies.

Cine-scapes-Richard Koeck 2013 Cine-scapes explores the relationship between urban space, architecture and the moving image. While an impressive amount of research has been done with regards to the way in which architecture is portrayed in film, this book offers a new perspective.... What happens if we begin to see the city as a place for an embodied visual consumption; a visual apparatus or, perhaps, a system that is based on movement, light and the body, and which we can explore in kinematic, kinetic, and kinaesthetic ways? Using film as a lens through which we look at urban spaces and places, Richard Koeck reveals the filmic and cinematic phenomena and spatial qualities that are present in postmodern landscapes, and which are perhaps otherwise disregarded or merely

passively consumed. Drawing on the author's extensive knowledge derived from architectural and film practice, Cine-scapes: offers insight into architecture and urban debates through the eyes of a practitioner working in the fields of film and architectural design emphasizes how filmic/cinematic tendencies take place or find their way into urban practices can be used as a tool for educators, students and practitioners in architecture and urban design to communicate and discuss design issues with regard to contemporary architecture and cities Cine-scapes ignites new ways of seeing, thinking and debating the nature of architecture and urban spaces.

Narrative Architecture-Nigel Coates 2012-03-26 The first book to look architectural narrative in the eye Since the early eighties, many architects have used the term "narrative" to describe their work. To architects the enduring attraction of narrative is that it offers a way of engaging with the way

a city feels and works. Rather than reducing architecture to mere style or an overt emphasis on technology, it foregrounds the experiential dimension of architecture. Narrative Architecture explores the potential for narrative as a way of interpreting buildings from ancient history through to the present, deals with architectural background, analysis and practice as well as its future development. Authored by Nigel Coates, a foremost figure in the field of narrative architecture, the book is one of the first to address this subject directly. Features architects as diverse as William Kent, Antoni Gaudí, Eero Saarinen, Ettore Sottsass, Superstudio, Rem Koolhaas, and FAT to provide an overview of the work of NATO and Coates, as well as chapters on other contemporary designers. Includes over 120 colour photographs. Signposting narrative's significance as a design approach that can aid architecture to remain relevant in this complex, multi-disciplinary and multi-everything age, Narrative Architecture is a must-read

for anyone with an interest in architectural history and theory.

Architecture, Means and Ends-Vittorio Gregotti 2010-11-15
Vittorio Gregotti—the architect of Barcelona's Olympic Stadium, Milan's Arcimboldi Opera Theater, and Lisbon's Centro Cultural de Belém, among many other noted constructions—is not only a designer of international repute but an acclaimed theorist and critic.

Architecture, Means and Ends is his practical and imaginative reflection on the role of the technical aspects of architectural design, both as part of the larger process of innovation and in relation to the mythic opposition between vision and construction. Interweaving the seemingly irreconcilable concerns of aesthetics, meaning, and construction, Architecture, Means and Ends reflects Gregotti's overarching claim that buildings always have a symbolic, cultural content. In this book, he argues that by making symbolic expression a primary objective in the design of a project, the designer will produce a practical aesthetic as well as an ethical solution.

Architecture, Means and Ends embraces that philosophy and will appeal to those, like Gregotti, working at the intersections of the history of design, art criticism, and architectural theory.

Multiform-Owen Hopkins
2021-02-23 This issue of AD
posits that this re-examination
and redeployment of

postmodernist approaches is the architectural attempt to reflect, grapple with and make sense of the current political and economic situation. The term 'ad hoc' is used to describe a resistance to stylistic conformity and predictability that embraces individuality, and which conceives architecture in a broader cultural space. As a mode of practice marked by stylistic divergence, the links, shared interest and continuities that exist among a range of architects are often overlooked. It will explore and provide a critical analysis of the design tactics and the strategies that inform them, and will investigate some key questions: What is it that has led architects to adopt tactics that have long been vilified within architectural culture? What connections exist between our present moment and the postmodern one, architecturally and in terms of the broader political shifts, in particular our present moment's return of the grand narrative - whether of populist nationalism, identity or climate change? What do these tactics represent, how do they reflect this situation,

and what do they offer in articulating a position for architects and the public role of their profession? This issue brings together a range of architects and critical voices to reflect on these questions and offer some answers. Essays by historians and critics situate practice in relation to postmodernism and its legacies. Following these will be essays by architects situating their work in relation to the ideas posited by the thematic introduction, and the broader contexts in which it operates and proceeds. The issue will be completed by interviews with early career architects, reflecting on their work thus far, its influences, pressures and future directions.

The Projective Cast-Robin Evans 2000-08-25 Robin Evans recasts the idea of the relationship between geometry and architecture, drawing on mathematics, engineering, art history, and aesthetics to uncover processes in the imagining and realizing of architectural form. Anyone reviewing the history of architectural

theory, Robin Evans observes, would have to conclude that architects do not produce geometry, but rather consume it. In this long-awaited book, completed shortly before its author's death, Evans recasts the idea of the relationship between geometry and architecture, drawing on mathematics, engineering, art history, and aesthetics to uncover processes in the imagining and realizing of architectural form. He shows that geometry does not always play a stolid and dormant role but, in fact, may be an active agent in the links between thinking and imagination, imagination and drawing, drawing and building. He suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings, largely in Europe, from the fifteenth to the twentieth century. From the Henry VII chapel at Westminster Abbey to Le Corbusier's Ronchamp, from Raphael's S. Eligio and the work of Piero della Francesca and Philibert Delorme to Guarino Guarini and the painters of cubism, Evans

explores the geometries involved, asking whether they are in fact the stable underpinnings of the creative, intuitive, or rhetorical aspects of architecture. In particular he concentrates on the history of architectural projection, the geometry of vision that has become an internalized and pervasive pictorial method of construction and that, until now, has played only a small part in the development of architectural theory. Evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need, suggesting that there is much more within the scope of the architect's vision of a project than what can be drawn. He defines the different fields of projective transmission that concern architecture, and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors.

Cultural Mapping as Cultural Inquiry-Nancy Duxbury 2015-05-22 This

edited collection provides an introduction to the emerging interdisciplinary field of cultural mapping, offering a range of perspectives that are international in scope. Cultural mapping is a mode of inquiry and a methodological tool in urban planning, cultural sustainability, and community development that makes visible the ways local stories, practices, relationships, memories, and rituals constitute places as meaningful locations. The chapters address themes, processes, approaches, and research methodologies drawn from examples in Australia, Canada, Estonia, the United Kingdom, Egypt, Italy, Malaysia, Malta, Palestine, Portugal, Singapore, Sweden, Syria, the United Arab Emirates, the United States, and Ukraine. Contributors explore innovative ways to encourage urban and cultural planning, community development, artistic intervention, and public participation in cultural mapping—recognizing that public involvement and artistic practices introduce a range of challenges spanning various phases of the research

process, from the gathering of data, to interpreting data, to presenting "findings" to a broad range of audiences. The book responds to the need for histories and case studies of cultural mapping that are globally distributed and that situate the practice locally, regionally, nationally, and internationally.

The Story of Post-

Modernism-Charles Jencks

2012-05-25 In The Story of Post-Modernism, Charles Jencks, the authority on Post-Modern architecture and culture, provides the defining account of Post-Modern architecture from its earliest roots in the early 60s to the present day. By breaking the narrative into seven distinct chapters, which are both chronological and overlapping, Jencks charts the ebb and flow of the movement, the peaks and troughs of different ideas and themes. The book is highly visual. As well as providing a chronological account of the movement, each chapter also

has a special feature on the major works of a given period. The first up-to-date narrative of Post-Modern Architecture - other major books on the subject were written 20 years ago. An accessible narrative that will appeal to students who are new to the subject, as well as those who can remember its heyday in the 70s and 80s.

The Art of Classic

Planning-Nir Haim Buras
2020-01-28 Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Yet the ideas and practices underlying these achievements have been abandoned. Nir Buras documents the humane design methods that held sway before the reign of Modernism and encourages us to relearn the time-tested principles of classic urban planning.

Urban Design-Jon Lang
1994-02-25 Urban Design the American Experience Jon Lang Urban Design: The

American Experience places social and environmental concerns within the context of American history. It returns the focus of urban design to the creation of a better world. It evaluates the efforts of designers who apply knowledge about the environment and people to the creation of livable, enjoyable, and even inspiring built worlds. Urban Design: The American Experience emphasizes that urban design must take a user-oriented approach to achieve a higher quality of life in human settlements. All the keys to this approach are spelled out in chapters that address: Urban design as both a product and process of communal decision-making Types of knowledge required as a base for urban design action How to apply recent environmental and behavioral research to professional design How human needs are fulfilled through design The true role of functionalism in design Urban design efforts of the twentieth century in the United States are examined within their socio-political context. Jon Lang reviews the urban design experience from

the beginning of the "City Beautiful" movement, paying particular attention to developments since World War II. He explores how the twentieth-century city has developed, as well as discusses the attitudes that have driven major movements in urban design. Readers learn a neo-Modernist approach that builds on the successes and failures of Rationalism and Empiricism, the two major streams of Modernist thought in architecture and urban design. They also gain an understanding of how the environment is experienced by people, and the implications of this experiencing for architectural and urban design. Numerous illustrations throughout demonstrate how various design schemes can be used. Urban Design: The American Experience provides architects, designers, city planners, and students in these fields with a model for their own future development as professionals. It is a valuable guide to design methodology (procedural theory) and other issues related to creating optimal

urban environments.

Urban Visions-Carmen Díez Medina 2018-06-23 This book is a useful reference in the field of urbanism. It explains how the contemporary city and landscape have been shaped by certain twentieth century visions that have carried over into the twenty-first century. Aimed at both students and professionals, this collection of essays on

diverse subjects and cases does not attempt to establish universal interpretations; it rather highlights some outstanding episodes that help us understand why the planning culture has given way to other forms of urbanism, from urban design to strategic urbanism or landscape urbanism. Compared with global interpretations of urbanism based on socioeconomic history or architectural historiography, *Urban Visions. From Planning Culture to Landscape Urbanism*, aims to present the discipline couched in international contemporary debate and adopt a historic and comparative perspective. The book's contents pertain equally to other related disciplines, such as architecture, urban history, urban design, landscape architecture and geography. Foreword by Rafael Moneo.

Montage and the Metropolis-Martino Stierli
2018-01-01 Montage has been hailed as one of the key structural principles of modernity, yet its importance to the history of modern

thought about cities and their architecture has never been adequately explored. In this groundbreaking new work, Martino Stierli charts the history of montage in late 19th-century urban and architectural contexts, its application by the early 20th-century avant-gardes, and its eventual appropriation in the postmodern period. With chapters focusing on photomontage, the film theories of Sergei Eisenstein, Mies van der Rohe's spatial experiments, and Rem Koolhaas's use of literary montage in his seminal manifesto *Delirious New York* (1978), Stierli demonstrates the centrality of montage in modern explorations of space, and in conceiving and representing the contemporary city. Beautifully illustrated, this interdisciplinary book looks at architecture, photography, film, literature, and visual culture, featuring works by artists and architects including Mies, Koolhaas, Paul Citroen, George Grosz, Hannah Höch, El Lissitzky, and Le Corbusier.

Suspending Modernity: The Architecture of Franco Albini

Kay Bea Jones

2016-04-01 Franco Albini's works of architecture and design, produced between 1930 and 1977, have enjoyed a recent revival but to date have received only sporadic scholarly attention from historians and critics of the Modern Movement. A chorus of Italian voices has sung his praises, none more eloquently than his protégé, Renzo Piano. Kay Bea Jones' illuminating study of selected works by Studio Albini will reintroduce his contributions to one of the most productive periods in Italian design. Albini emerged from the ideology of Rationalism to produce some of Italy's most coherent and poetic examples of modern design. He collaborated for over 25 years with Franca Helg and at a time when professional male-female partnerships were virtually unknown. His museums and installation motifs changed the way Italians displayed historic artifacts. He composed novel suspension structures for dwellings, shops, galleries and his

signature INA pavilions where levity and gravity became symbolic devices for connoting his subjects. Albini clarified the vital role of tradition in modern architecture as he experimented with domestic space. His cohort defied CIAM ideologies to re-socialize postwar housing and speculate on ways of reviving Italian cities. He explored new fabrication technologies, from the scale of furniture to wide-span steel structures, yet he never abandoned the rigors of craft and detail in favor of mass-production. *Suspending Modernity* follows the evolution of Albini's most important buildings and projects, even as they reveal his apprehensive attitudes about the modern condition. Jones argues here that Albini's masterful use of materials and architectural expression mark an epic paradigm shift in the modern period.

The Baroque in Architectural Culture,

1880-1980-Andrew Leach
2016-03-09 In his landmark volume *Space, Time and Architecture*, Sigfried Giedion paired images of two iconic spirals: Tatlin's Monument to the Third International and Borromini's dome for Sant'Ivo alla Sapienza. The values shared between the baroque age and the modern were thus encapsulated on a single page spread. As Giedion put it, writing of Sant'Ivo, Borromini accomplished 'the movement of the whole pattern [...] from the ground to the lantern, without entirely ending even there.' And yet he merely 'groped' towards that which could 'be completely effected' in modern architecture-achieving 'the transition between inner and outer space.' The intellectual debt of modern architecture to modernist historians who were ostensibly preoccupied with the art and architecture

of earlier epochs is now widely acknowledged. This volume extends this work by contributing to the dual projects of the intellectual history of modern architecture and the history of architectural historiography. It considers the varied ways that historians of art and architecture have historicized modern architecture through its interaction with the baroque: a term of contested historical and conceptual significance that has often seemed to shadow a greater contest over the historicity of modernism. Presenting research by an international community of scholars, this book explores through a series of cross sections the traffic of ideas between practice and history that has shaped modern architecture and the academic discipline of architectural history across the long twentieth century. The editors use the historiography of the baroque as a lens through which to follow the path of modern ideas that draw authority from history. In doing so, the volume defines a role for the baroque in the history of architectural historiography

and in the history of modern architectural culture.

A Critic Writes-Reyner Banham 1999-03-24 "Reyner Banham's special skill was to take objects that we otherwise might take for granted and to open our eyes and minds to their visual and cultural associates. Unlike many historians he had an 'eye' and this came through in his writings. He was also a popularizer—ahead of his time. These perspectives are every bit as relevant now as they were in the past."—Sir Norman Foster, Foster Associates "Banham's stubborn insistence on the proper terms by which to measure the contemporary predicament reveals the depth and the breadth of his contribution to architectural history and theory. The modern, for Banham and for us, simply refuses to go away."—Anthony Vidler, author of *The Architectural Uncanny*

The Architectural Capriccio-Dr Lucien Steil

2014-01-17 Bringing together leading writers and practicing architects including Jean Dethier, David Mayernik, Massimo Scolari, Robert Adam, David Watkin and Leon Krier, this volume provides a kaleidoscopic, multilayered exploration of the *Architectural Capriccio*. It not only explains the phenomena within a historical context, but moreover, demonstrates its contemporary validity and appropriateness as a holistic design methodology, an inspiring pictorial strategy, an efficient rendering technique and an optimal didactic tool. The book shows and comments on a wide range of historic masterworks and highlights contemporary artists and architects excelling in a modern updated, refreshed and original tradition of the *Capriccio*.

Palladio's Children-N.J.

Habraken 2007-04-11 Based on many years of personal observation, Palladio's Children critically examines the role of the architect as a professional descendent of Palladio, and as an heir to his architectural legacy. Seven innovative and carefully crafted essays explore the widening ideological schism between today's architects whose core values, identity and education remain rooted in the Renaissance legacy of creating artful 'masterpieces', and the practical demands on a profession which acts within an evolving, ubiquitous and autonomous built environment or 'field'. Clearly written yet expressing complex, evolving ideas, this extended argument opens a new forum of debate across design theory, professional practice and academic issues. Moving the subject on from a

historical perspective, Habraken shows how architects are increasingly involved in the design of everyday buildings. This must lead to a reassessment of architects' identities, values and education, and the contribution of the architect in the shaping of the built environment.

The Urban Design Reader

Michael Larice 2013-05-07 The second edition of The Urban Design Reader draws together the very best of classic and contemporary writings to illuminate and expand the theory and practice of urban design. Nearly 50 generous selections include seminal contributions from Howard, Le Corbusier, Lynch, and Jacobs to more recent writings by Waldheim, Koolhaas, and Sorkin. Following the widespread success of the first edition of The Urban Design Reader, this updated edition continues to provide the most important historical material of the urban design field, but also introduces new topics and selections that address the myriad challenges facing

designers today. The six part structure of the second edition guides the reader through the history, theory and practice of urban design. The reader is initially introduced to those classic writings that provide the historical precedents for city-making into the twentieth century. Part Two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid-1990s. These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places. The authors in Part Three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places. These selections are largely describing the outcomes of mid-century urban design and voicing concerns over the placeless quality of contemporary urbanism. The fourth part of the Reader explores key issues in urban design and development. Ideas about sprawl, density, community health, public

space and everyday life are the primary focus here. Several new selections in this part of the book also highlight important international development trends in the Middle East and China. Part Five presents environmental challenges faced by the built environment professions today, including recent material on landscape urbanism, sustainability, and urban resiliency. The final part examines professional practice and current debates in the field: where urban designers work, what they do, their roles, their fields of knowledge and their educational development. The section concludes with several position pieces and debates on the future of urban design practice. This book provides an essential resource for students and practitioners of urban design, drawing together important but widely dispersed writings. Part and section introductions are provided to assist readers in understanding the context of the material, summary messages, impacts of the writing, and how they fit into the larger picture of the urban design field.

Modern Architecture Through Case Studies 1945 to 1990

Peter Blundell Jones
2012-08-21 Once again, new interpretations are presented of some of the most famous architecture of the period. Work by lesser-known architects, whose influence and role have been overlooked by conventional histories of the subject, is discussed. The case study structure allows each example to be discussed and used as a springboard to explore different theoretical approaches. Filled with beautiful photographs, plans and architect's drawings, this is a clear and accessible discussion on a period of architecture that engages many questions still under debate in architecture today.

Designing the Modern City-

Eric Paul Mumford
2018-01-01 A comprehensive new survey tracing the global history of urbanism and urban design from the industrial revolution to the present. Written with an international

perspective that encourages cross-cultural comparisons, leading architectural and urban historian Eric Mumford presents a comprehensive survey of urbanism and urban design since the industrial revolution. Beginning in the second half of the 19th century, technical, social, and economic developments set cities and the world's population on a course of massive expansion. Mumford recounts how key figures in design responded to these changing circumstances with both practicable proposals and theoretical frameworks, ultimately creating what are now mainstream ideas about how urban environments should be designed, as well as creating the field called "urbanism." He then traces the complex outcomes of approaches that emerged in European, American, and Asian cities. This erudite and insightful book addresses the modernization of the traditional city, including mass transit and sanitary sewer systems, building legislation, and model tenement and regional planning approaches. It also examines the urban design

concepts of groups such as CIAM (International Congresses of Modern Architecture) and Team 10, and their adherents and critics, including those of the Congress for the New Urbanism, as well as efforts toward ecological urbanism. Highlighting built as well as unbuilt projects, Mumford offers a sweeping guide to the history of designers' efforts to shape cities.

Rome, Postmodern Narratives of a Cityscape-

Public Places - Urban

Spaces-Matthew Carmona
2012-09-10 Public Places - Urban Spaces is a holistic guide to the many complex and interacting dimensions of urban design. The discussion moves systematically through ideas, theories, research and the practice of urban design from an unrivalled range of sources. It aids the reader by gradually building the concepts one upon the other towards a total view of the subject. The author team explain the catalysts of change and renewal, and explore the global and local contexts and processes within which urban design operates. The book presents six key dimensions of urban design theory and practice - the

social, visual, functional, temporal, morphological and perceptual - allowing it to be dipped into for specific information, or read from cover to cover. This is a clear and accessible text that provides a comprehensive discussion of this complex subject.

The Drama of Space-Holger Kleine 2017-10-23 The experience of architectural spaces is formed by the way they are staged. The Drama of Space examines the composition and articulation of architectural spaces in terms of spatial dramaturgy, as a repertoire of means and strategies for shaping spatial experience. This fundamental approach to architectural design is presented in four parts: Archetypal principles of spatial composition are traced from the study of three assembly buildings of the early modern period in Venice. Theatre, film, music, and theory provide background knowledge on dramaturgy. Detailed analyses of 18 international case studies offer new perspectives on contemporary architecture.

The book ends with a systematic presentation of the dramaturgy of space, its parameters and tools, in architectural design.

Reckoning with Colin

Rowe-Emmanuel Petit 2015-02-20 While the first half of the 20th century in architecture was, to a large extent, characterized by innovations in aesthetics (accompanied by succinct and polemical manifestoes), the post-war decades saw emerge a more refined and intellectual disciplinary framework that eventually metamorphosed into the highly theory-focused moment of the 'postmodern'. Colin Frederick Rowe (1920 - 1999) was a leader of this epistemic shift due to his aptitude to connect his historical and philosophical erudition to the visual analysis of architecture. This book unites ten different perspectives from architects whose lives and ideas intersected with Rowe's, including: Robert Maxwell Anthony Vidler Peter Eisenman O.
